

BEEF TMR Pellet

Patmore Feeds' Beef TMR Pellet is a highly palatable 9mm ration formulated for use in total mixed rations prepared on farm by addition of an adequate fibre source (hay/silage/straw). This pellet is a high starch (33%), low NDF (no added fibre) pellet with a balanced supply of minerals, trace elements & vitamins to enhance growth rates & maintain the wellbeing of cattle. Fortified with rumen buffers to reduce the risk of acidosis, the "TMR" pellet is designed to be mixed into a total mixed ration. The inclusion level of Patmore's TMR pellet will depend on the quality of the forage source being used in the total mixed ration. Suggested inclusion levels of the TMR pellet with different types of forages can be seen below. Please note this is a general guide only. As forage nutritional quality can vary considerably, it is advisable to discuss forage suitability and mixing rates with a nutritionist prior to blending and feeding out to cattle. If you do not have a nutritionist, Patmore feeds can arrange a discussion with our own.

TYPICAL ANALYSIS Dry Matter Basis		Mixing Rates Per Tonne		As-Fed feeding rates of total mixed ration (kg per 100kg Liveweight)
Nutrient	Level	Fibre Type	Forage Moisture (%)	
Energy (Ruminant ME)	13.2MJ ME/kg	Silage	65	6.5
Crude Protein	20%	Haylage	50	5.0
Urea	Added	Hay	10	3.5
Ingredients - Cereal grains & by-products, legumes, legume by-products, vegetable protein meals & oils, limestone, salt, vitamin & mineral premix.		Straw	10	3.5

Please note this is a general guide only, please contact Patmore Feeds to discuss.

Withholding Period: NIL

Storage: Store in a dry, well ventilated silo that is free from pests and vermin.

Best by: within six months of manufacture.
