

DAIRY - Summer Lactation Pellet

We are proud to be a part of growing regional Western Australia and value your support.

Patmore Feeds' Summer Lactation Pellet is a highly palatable 6mm pellet formulated for lactating dairy cows grazing on medium quality pastures during the drier and hotter summer season in Western Australia.

This pellet is designed to stimulate dry matter intake and meet nutrient requirements when forage quality or quantity is limiting production. It has a balanced supply of minerals, trace elements and vitamins to help maintain the health and well-being of the cow. Feeding rates should be adjusted depending on body condition and production of the cow as well as quality and quantity of pasture and/or roughage available.

TYPICAL ANALYSIS Dry Matter Basis

Nutrient	Level
Energy (Ruminant ME)	13.2 MJ ME/kg
Crude Protein	22%
Urea	Added
